The Newest Technology and the Next Generation in Cleaning

How Does Bacoban Work?

Conventional disinfectants are effective immediately – but only for a short period of time. Microorganisms are only killed during the first few minutes of a traditional disinfectant’s active period. Within minutes, when the traditional disinfectant has evaporated, the area treated is again subjected to microbial strains until the next disinfection. The net result is a long hygiene gap that continues until the next scheduled disinfection. During this time, surfaces are subjected to the repeated settlement of microorganisms.

PATENTED Controlled Release Technology

Bacoban® DLUS was developed to create a surface disinfectant that not only disinfects but also utilizes controlled release technology. Bacoban® DLUS utilizes this advantage to the benefit of patients, staff members and to improve infection control. The real benefit of such a disinfectant, if integrated into established disinfection plans, is that it ensures a significantly higher safety against the spreading of germs and viruses, thus reducing re-infection. It effectively closes the hygiene gap!

MADE IN CANADA

Security With Bacoban® DLUS

Security With Bacoban® DLUS

- Bacoban® DLUS is a 99.99% hard surface disinfectant, tested by dermatologists.
- It's water-based, making it safe for use on all surfaces, including phones, vehicles, computers, medical equipment etc...
- Bacoban® DLUS has zero VOC's (volatile organic compounds) meaning it's free of any alcohol, phenol & aldehyde.
- Patented 'controlled release' technology makes Bacoban DLUS® the secure choice.
- Boeing & Airbus Certified
